

R.D. Memorial College of Nursing enhances the caliber and scope of its educational offerings. Nearly all of the revised specifications have been installed, and the academic schedule is currently being programmed as new items are implemented.

Given that the specifications for every laboratory have been revised. By testing the material first on manikins and subsequently on patients to ascertain the outcome, students are motivated to use it. Labs with quality-based requirements are also available. Through practice sessions, students can identify the issue and its treatment by utilizing tools such as medication, surgery, injections, medical instruments, and so on.

Through a number of measures, the hospital firmly guarantees that the standard of patient care is not jeopardized. Undergraduate and postgraduate students are given sufficient training by the hospital (Government, Hamidia Hospital, Kamla Nehru Hospital, Sultanania Zanana Hospital, Jai Prakash Hospital) by exposing them to diverse hospital departments, especially distinct ward settings and critical care regions. Under the guidance of academic staff and nursing professionals, students gain knowledge ranging from fundamental to advanced patient care. B Sc, PBB Sc, and M Se nursing students' clinical exposure properly equips them for staff nurse roles with holistic growth.

It is an excellent chance for students to learn how to provide patients with a range of medical issues with high-quality care. The personnel in medicine, nursing, and allied health are suitably qualified. The hospital employs nurses by necessity. The most recent diagnostic and therapeutic technologies are available at the hospital.

During their clinical rotations, students receive enough personal protective equipment (PPE). Additionally, in accordance with infection control policy, students who receive needle stick injuries are provided with prompt PEP (Post Exposure Prophylaxis).

The hospital produced SOPs/Manuals that contain exact guidelines and information about infection control practices, staff and student safety regulations,

Bhopal (M.P.)

and standards of patient care. Every two years, internal audits evaluate the standard of patient care, and standard operating procedures are regularly modified. Students receive instruction from the infection control staff on hospital rules, biological waste management, donning and donning techniques, and infection control recommendations. Teachers and students have worked hard to ensure safety as front-line warriors. In order to control the infection, the hospital protocol is more thorough and strictly followed.

The students also rigorously follow these guidelines. The professors and the hospital quality control staff helped students enhance their clinical knowledge, clinical skills, and awareness of patient care and safety. All physician, nursing, and allied healthcare staff members at the hospital have undergone training and certification in infection prevention and control (IPC) and high-quality patient care.

STANDARD OPERATING PROCEDURE FOR COMMUNITY HEALTH NURSING LAB
